

NC program simulation on 3D machine models

Eliminate costly programming mistakes and accelerate onsite startup

Machine Simulation is an add-on for CIMCO Edit and a powerful addition to the existing Backplot. Prove-out your NC program on a 3D model of your CNC machine and see the exact movement of components such as heads, spindles, and even peripheral devices. Collisions and out of limit moves are automatically detected to ensure that error-free code is sent to the physical machine.

BENEFITS

Why use CIMCO Machine Simulation?

Shop safety

Protect employees from hazardous situations and machines from costly damage by testing programs on PC before running them on your machines.

Faster shifting

Quickly switch between machine configurations for faster shifting of job to a different machine.

Accelerate startup

Reduce time spent on setup and scrap from initial test runs and calibration. Run your program with confidence the first time.

Train at PC instead of machine

Use the available 3D simulation and NC editing functions to train employees in operating machines and modifying code.

Faster iterations

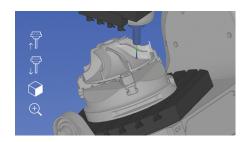

Optimize your programs by quickly trying out new ideas and testing your modifications on PC. Save time, resources, and wear on machine tools.

Fully integrated add-on for CIMCO Edit and a powerful solution for doing fast iterations of simulating and fixing problems in your code.

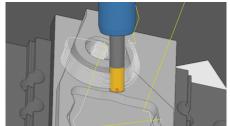

FEATURES

What is included?

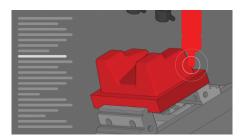

Full control of simulation

Simulate your NC program from any angle or distance using zoom, pan, and rotate. Adjustable speed in both directions. Jump to next/previous tool, cutting pass, or move.

Stock material removal

High and low tolerance options for simulation of stock removal. Includes options to define stock, or import your stock as an STL file. The resulting stock can be exported as an STL file.

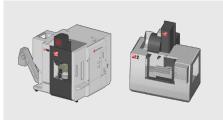

Inspection

Side-by-side display of code, simulation and Simulation Report. Components turn red when colliding and collisions, out of limit moves and errors are recorded in the Simulation Report.

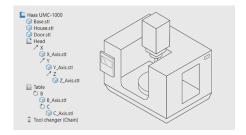

Simulation Report

The Simulation Report shows errors in your NC program. Select an error and jump to the corresponding line. Modify the code and the Simulation Report verifies that the problem is resolved.

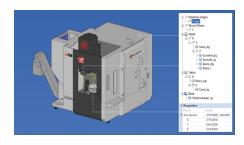

Downloading Machines

Download and install machines including models directly from within CIMCO Edit and Machine Simulation. Includes many preconfigured machines from vendors such as Haas.

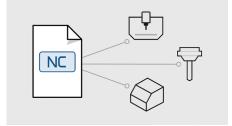

Machine Configuration Editor

Configure your own specific machine (if not available for download). Add component geometry and set the axis, travel limits, feedrates, and tool change positions.

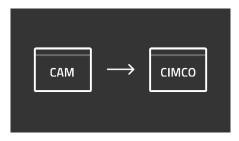

Geometry Manager

A machine-tree shows the machine's definition. Properties of components such as head, table, and workpiece can be viewed, or visibility toggled.

Scanning Commands

Automate the task of creating tools, loading geometry, specifying work offsets and defining stock when starting Backplot or Machine Simulation.

CAM integrations

Transfer tool, holder and geometry data from Mastercam, SolidCAM, or other supported CAM systems. Changes made in your CAM system are instantly reflected in CIMCO Machine Simulation.

Navigation

Auto-generate an operation structure from your NC code.

Variable Watch

Track the state of variables in your NC program.

Tool Manager

View and modify the tools in your NC program.

Free online courses

Learn about milling and turning, trigonometry, NC code, and more.

CIMCO is an industry leading developer of software solutions for Computer Integrated Manufacturing and Industry 4.0. Our software suite includes advanced CNC editors, simulation software, DNC communications software, Manufacturing Data Collection for real-time monitoring and analysis of shop floor productivity, and Manufacturing Data Management for managing, organizing and securely storing production related data.

Since 1991, CIMCO has helped companies worldwide improve their competitive edge by providing reliable software and outstanding on-site assistance. Our network of CAD/CAM/CNC resellers and consultants have sold more than 100,000 licenses worldwide and we hold great pride in continuously supporting and meeting our customers' demands by developing intelligent and competitive solutions.
